[“Boulder City—Bids have been called for construction of a huge dredge to be used to provide new channel sections for Colorado river below Boulder Dam. Dredging is necessary due to change of gradient of the river’s bed, as a result of regulated silt-free flow of water after construction of the dam. Silt has raised river bed several feet between Needles and Topock, causing river to spread over a large area. Dredge, which will take about a year to complete, will cut a new channel in this section and later will be used in the Cibola valley farther south.” (ENTIRE ITEM)]

[“Blythe—The course of the Colorado river eight miles below Palo Verde was changed when 700 pounds of powder were used to blast a two-mile-long pilot channel across an acute angle on the Cibola side of the river. The angle had caused a bar, made up of material eroded from the Cibola valley side, to form at the mouth of the outfall drain from Palo Verde valley. The bar eventually would have stopped the drainage completely and allowed the water to back up on tillable land, so bureau of reclamation engineers, working with officials of the Palo Verde irrigation district blasted to change the river course.” (ENTIRE ITEM)]

[67] “C., P. [2]” could be P. Calfas or P. Caufourier, who were contemporaneous authors writing on similar subjects in *Le Génie Civil* (see citations under these authors’ names in this section). It is feasible that the author cited herein as “C., P. [1]” is also the same as one of these authors, but given the separation of some sixty years he has more prudently been cited separately.

["Whereas, The unrestrained waters of the Colorado river are a frequent cause of trouble to several adjoining states, and also have been the cuase of international questions arising between Mexico and the United States of America; be it [¶] Resolved, That we recommend the Congress of the United States of America to authorize the War Department to aid in the erection of a suitable dam at the most dangerous point on the Colorado river, that will prevent future trouble of this nature, and also to serve to conserve their waters, thereby converting them into available power, without interfering with vested interests of any kind. Furthermore, we believe that the immediate development of the hydro-electric power on this river would prove to be a natural asset of untold value."]
